# INTERIUS™ SOFTWARE SUITE

PACKAGE SPECIFICATION MANAGEMENT

Companies across the globe have a current process in place to manage packaging requirements for products and parts that are outdated and inefficient, especially in our fast-paced world. The process is manual, labor-intensive, and can take months to collect, compile, and approve packaging specifications. You're left with numerous files saved to your computer which can make it difficult to find the most current packaging data form.

Halt the Package Specification Headache with Complete Digitalization

Package Specification Management is a cloud-based packaging-specification management module architected by packaging engineers for packaging engineers.

The module includes total workflow management that enables collection, revision control, and standardized supplier participation. It eliminates manual and redundant processes with watermarked plans, dashboards, and reports.

In the current state, it can take 16 months to obtain 30% completion of processing and approving PDFs. You can achieve a future state where it takes only 2 months to obtain 80% completion with Surgere Interius™ Packaging Specification Management.

Benefits That Simplify Your Complex Packaging Supply Chain

Manages workflow process from creation of a new program, to approved packaging plans

Compiles a complete packaging plan to optimize box space, prevent damage during transport, and save on freight costs

Calculates packaging quotes to post launch with accurate cost, dimension, and ownership information

Provides uniformed and controlled process through a central online database that tracks changes and collects accurate, validated packaging data

Includes ERP integration, real-time reporting, and a complete history of the packaging plan creation process

Available at no cost to suppliers for cohesive collaboration and approval

WANT TO REDUCE UP TO 60% OF YOUR PACKAGE SPECIFICATION COMPLETION TIME?
