# RETURNABLE CONTAINER MANAGEMENT

## How Many Returnable Containers Do You Lose a Year?

Missing returnable packaging creates organizational inefficiencies. In addition, it becomes costly to use large amounts of corrugate in emergency shipping situations.

A supply chain that keeps moving with the right type and number of containers, in the right place, at the right time, is only possible with reliable data at 99.9% accuracy.

### Expand Visibility

Get real-time visibility of assets

### Increase Efficiency

Take control of materials. Make sure the right assets, and the right amount, are distributed throughout the supply chain.

### Reduce Labor & Cost

Reallocate manpower used recording and searching for containers that enter and exit facilities.

### Increase Sustainability

Minimize the use of cardboard and expedited shipping.

One Surgere client estimated that up to **40%** of returnable containers were lost every year across their network before implementing Returnable Container Management.

The client now has **100%** full visibility to their entire container fleet.

## Your Visibility Solution

IoT technology collects highly accurate data that is fed into Surgere's Interius™ software platform. Interius produces actionable, real-time data while leaving users in control.

Follow containers throughout your network with Surgere's Interius Returnable Container Management solution.

### Fix Supply Chain Disruptions with Returnable Container Management

- Container Loss
- Insufficient Container Visibility
- Spending on Unbudgeted Costs
- Production Downtime
- Freight Inefficiencies
- Quality Issues
- Safety Issues
